

Language can be a major barrier to overcome in the modern classroom, and one that presents a complex problem for districts with a varied, numerous, multi-lingual, and multi-cultural student population.

To solve this problem, Audio Enhancement® developed CLEAR Connect™, a live translation solution integrating existing classroom audio technology and advanced cloud computing to help bring multi-lingual learning to students across the country.

How Does It Work?

Audio Enhancement's XD Teacher Microphone enables an instructor's voice to be transmitted safely and securely from a compatible classroom amplifier to a third party cloud-based translation service, providing a fast and accurate translation or transcription of teacher instructions into a student's language of choice. The translated audio is then broadcast to the student, delivering equal learning opportunities to all students.

Making a difference in education since 1978
