

Lighthouse gives district leaders a single place to monitor and analyze every deployment across their schools. Built on the Audio Enhancement® AE1 platform, it provides centralized visibility into system performance and proactive system health monitoring. Districts can catch issues before they reach the classroom, driving more daily impact across every building while reducing maintenance overhead and the burden on IT.

Key Features

Single Dashboard

View all connected appliances across the district from one centralized location.

Health Monitoring

Monitor system health across the district to quickly identify issues, ensuring system reliability.

District-Wide Analytics

Track performance metrics across connected systems to gain visibility into usage, trends, and overall system performance.
